

BIO-MEDICAL WASTE CONTAINERS

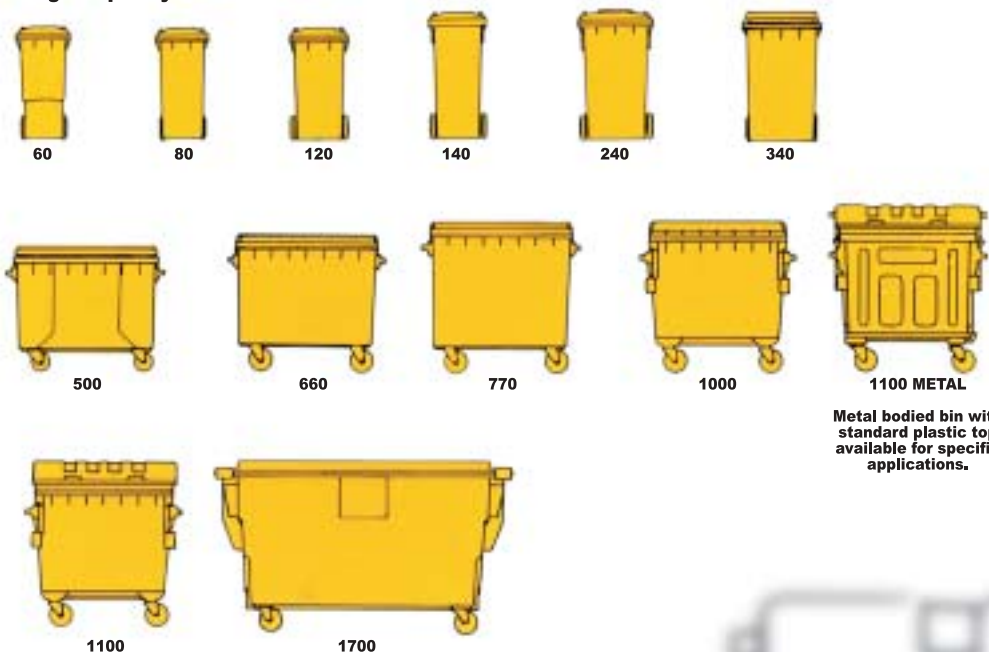

www.ottoasiapac.com

Clinical Waste System

OTTO is the only supplier of large clinical waste containers who is capable of manufacturing them in Europe & Asia. All others rely on imports. That is why OTTO can give the best customer service, a full range of sizes to meet your requirements, speedy delivery, technical support and competitive pricing.

OTTO is already working with the large hospitals and clinical waste contractors to bring forward the innovation that the inevitable tighter legislation will demand.

Range Capacity

Features/Options

- All OTTO Clinical Waste Containers are fitted with lid locks
- Central braking system for four-wheeled bins
- 300mm wheels for 340 litres containers
- Towing brackets
- Heavy duty castors
- Non-marking tyres

Metal bodied bin with standard plastic top available for specific applications.

BIO-MEDICAL WASTE CONTAINERS

THE OTTO CLOSED SYSTEM GUARANTEES A CLEAN BILL OF HEALTH

Regulation, moral obligation and accountability

Departments of Health and Environment, Royal Commissions, EC, EPA, WHO and HSE all have guidelines and regulations which impact on clinical waste producers. This spells out that all producers now have a legal, as well as moral, obligation to ensure/disposal of their waste is safely handled.

The removal of Crown Immunity and The Duty of Care makes everyone involved, large and small, accountable for safe disposal. The first prosecutions have highlighted the need for Disposal Planning. However, a recent Coopers and Lybrand study of health authorities and trusts showed 60% as yet do not have adequate plans to incorporate all the new legislation.

Hygienic and secure

The coloured HDPE plastic construction does not bend or dent to create snagging points to rip open plastic bags and there is no paint to flake off to create rust and dirt traps. It steam cleans easily for prompt return to the ward.

The rigid lid does not warp when opened from one corner and would even support the weight of someone jumping on it. As the lid lock is integrated into the hinge it does not spring open if the bin is knocked against a wall.

Reducing exposure and handling reduces risk

Once a yellow bag is placed in an OTTO Clinical Waste Container and the lid lock snaps shut, it need not be handled again. The container is secure and mobile, from ward or surgery to the incinerator – no secondary handling. A closed cycle in the fullest sense.

Lid lock integrated into the hinge

All producers can be catered for

Small waste producers also need special attention. OTTO makes the widest range of smaller two-wheeled containers as well as boxes with integrated lids for transporting waste from home visits.

Durable towing bracket

Lid designed to avoid trapped fingers

660 litre containers at ward

Secure attached lid containers can be used for home visits

1100 litre containers emptying directly into the incinerator hopper

Safely sealed containers are transported to the incinerator site

Marked for life

Some Clinical Waste Identification stickers can quickly peel off following steam cleaning. OTTO Containers are hot foil stamped to make a truly permanent mark. This can include your own unique identification logo or name.

Duty of care resolved

OTTO have developed an automatic method of recording bin movements – the WISE System. A unique electronic micro-chip is moulded into each bin. This code is 'read' as the container leaves the producer, and again at the point of disposal. Duty of Care statements follow instantly.
