THE OTTO GROUP

We listen,
communicate, respond
& improve...
because OTTO cares.

The OTTO Group has been in the business of waste management for over six decades.

Today we remain focused and continue to supply high quality products and services to municipalities as well as to commercial and industrial companies across the Asia Pacific regions. Headquarter in Europe, OTTO has manufacturing facilities in Europe, Eastern Europe, USA and Asia. With her overseas HQ for ASIA in Singapore, she oversees the operations in South-East Asia, Far-East Asia, China, India & Middle-East continents.

OTTO has distinguished herself as one of the few truly global players, providing total and comprehensive waste management systems. R&D in Europe, all our receptacles are constantly customized to ensure aesthetics meets functionality. Besides the traditional plastic wheeled bins, OTTO has redeveloped and brought a new angle at perceiving waste receptacles.

In addition to roto-moulded street furnishing receptacles, creative and stylish designs can also be achieved by our fibre glass and stainless steel facilities.

With OTTO, you have the assurance that all your waste receptacles can be easily customised, blending into your environment.

STAINLESS STEEL BINS

Aesthetics meets functionality.

MATERIALS & FINISHING

- Stainless Steel (304)
- Stainless Steel (316)
- Hairline finish
- Mirror finish

FEATURES

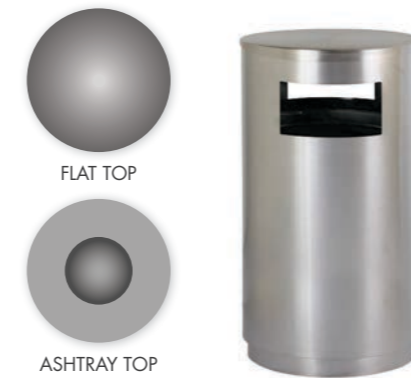

- Weather resistant
- High durability
- Easy maintenance and handling
- Customised bins available

OTTO
WORKS

STAINLESS STEEL PROCESS

In designing and customising the versatility of our stainless steel range is its greatest strength.

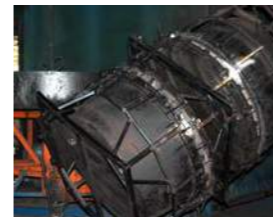

Stainless steel is excellent for both public and private areas. Indoor and outdoor use.

FIBRE GLASS PROCESS

Glass Fibre - Reinforced Plastic (GFRP) is a fibre reinforced polymer made of plastic matrix reinforced by fine fibres of glass.

FRP is strong and light weight. Ability to customise to any shape and size.

ROTO-MOULD PROCESS

Rotational moulding, also known as roto-moulding. This is a process for creating mostly hollow items, typically plastic.

A heated hollow mould is filled with a charge or shot weight of material, it is then slowly rotated causing the softened material to disperse and stick to the walls of the mould.

POWDER COATING PROCESS

Tougher than conventional paint. The powder may be thermoplastic or a thermoset polymer applied electrostatically.

Powder coating can produce thicker coatings than conventional liquid coatings without running or sagging.

CONCEPT DESIGN BINS

Specially designed bins are produced to meet today's specific demands and requirements. OTTO is able to research, develop and produce a one-of-a-kind bin for our clients.
